## Abstract of the Disclosure

### METHOD AND APPARATUS FOR SERVER SIDE QUEUING TO CONTROL PAGE PRESENTATION ON Web ENABLED DEVICES

A method and apparatus for controlling at the server-side the order in which supplemental files referenced in an HTML page are served to a client machine requesting the page. The server queues the supplemental files in an order dictated within the HTML code itself and serves the supplemental files in the order dictated in the queue regardless of the order of which the Web browser at the client-side requests the supplemental files.
